

GOLDFIELD CON-SOLIDATED SOUND AS GIBRALTAR

(Continued from Page 1.)

levels the ledge has been explored and ore bodies opened up. On the 600 level, the lowest level of the mine, an ore body twenty feet wide has been crosscut and connected by raises with the same ore body on the 450 level, proving beyond doubt that in this portion of the mine good ore is continuous from the upper levels to the 600. A crosscut on this level will soon connect with the Clermont shaft. In this crosscut, a narrow ore body, which has been crossed recently, is probably the downward extension of the main ore shoot of the Mohawk-Jumbo lease.

"Combination"—In the Combination development work has progressed steadily during the year, and 28,473.47 tons of ore, averaging \$40.218 per ton, have been mined to supply the Combination mill. The Combination workings have been connected with the Mohawk on the 280 and 380 levels. The main Combination workings have been connected with the Reilly workings on four levels, and very good ore is exposed to the bottom at 380 feet. In the central part of the property a much greater amount of ore than was previously suspected has been opened up. Very recently rich ore has been discovered on the 230 level north and covered on the 230 level north and west of the older workings. A drift on this vein shows an ore body six feet in width and already exposed sixty feet in length, which averages higher than \$100 per ton. Developments are not yet sufficient to determine the full size of this ore body, but it appears that this portion of the property and the large area lying between it and the Mohawk workings, in which good ore was formerly unknown, maybe very profitable. Recent developments in the Combination show that this property will compare favorably in production with the Mohawk.

"Red Top and Laguna"—Recent development work from the Red Top has traced ore on the 260 level fifty feet north of the older workings, and a very promising ore body has been followed more than 150 feet south on the Lucky Boy claim, in territory where no ore was heretofore supposed to exist.

YIELDS OVER \$15,000,000.

Referring to ore bodies, the report of John H. Mackenzie, general manager, continues:

"Excepting in the course of exploratory work, no ore has been extracted from your property below a depth of 400 feet, yet the property has yielded over \$15,000,000. The total ore produced averaged \$73.48 per ton. Owing to the short term of

"HELLO GIRL" MARRIED TO A JUSTICE OF PEACE

Miss Birdie Quillian, one of the most popular young ladies of this city, and Phil H. Lightfoot, of Millers, were united in marriage last evening at the home of the bride by the Rev. Lloyd B. Thomas. Only immediate friends of the contracting parties were present at the ceremony and the wedding supper which followed. A number of handsome presents were received.

Mrs. Lightfoot is one of the most charming and prettiest young ladies in Tonopah and has resided here for a number of years. She has been an attaché of the telephone company where by her courteous manner and accommodating ways she has won many friends. Mr. Lightfoot is justice of the peace at Millers and is also connected with the Desert Power and Mill company and his friends are legion.

The happy couple will leave this morning for Millers and after a month will take a trip to Virginia and visit Mr. Lightfoot's parents, returning to Millers in about April—where they will reside.

Location notices in triplicate—handiest affair for prospectors and miners—contains carbon—150 notices in book. For sale at the Bonanza office.

leases and the policy adopted by lessees of gouging after the high-grade ore only, large quantities of low grade were purposely left, and in their haste a large proportion of high grade was overlooked, and in some cases was left for pillars. It is impossible to measure the ore remaining without driving numerous crosscuts in the foot and hanging walls, which would be of little use in the extraction of ore; and not until stopping on a large scale has been carried on for several months can reliable estimates of reserve ore be made.

GOOD FOR LONG LIFE.

"Therefore, the past production made by your property, the length of the ore producing zone, the vast area of unexplored territory owned by your company within this zone in which bonanzas similar to the Hayes-Monnette and Frances-Mohawk may be uncovered, together with the quantity of rich ore exposed in the present stopes and the splendid results already obtained from the comparative small amount of development work on the deeper levels, insure not only immediately satisfactory returns to the shareholders, but long life for the property, with every prospect of a continuance of its productive capacity."

THE JURY VENIRE FOR THE PRESENT TERM OF COURT

Returns have been made on the jury venire for the present term of court. The following will compose the panel of trial jurors who will be in attendance during this session:

Tonopah—Ralph Wardle, William McFadden, P. M. Arnett, E. E. Bertrand, William Dow, Newton Crumley, A. R. Graham, R. H. Barnes, Clarence Carr, E. E. Walker, W. W. Pangburn, S. Bacenitti, Milo Davidovich, E. E. Lawson, Peter M. Cunningham, Manuel Cardoza, Al Wardle, William Sawle, Joe Rippingham, James Cleary, W. V. Ryan, James Wicks, Joseph Busch, P. R. Tewilliger, Hugh Sutherland, Matt Devine, J. A. Scurlock, E. P. Blake, Patrick H. Farrell, J. P. Brissell, Angus McDonald, W. A. Murphy, James G. Ford, Percy A. Bonham, M. O. Corey, George W. Pettygrove, Paul A. Tarpey, Paul F. Revert, Orr Graden, Ed. Thornton, William W. Houghton, George Beckley, G. N. Benn, William H. Blackburn, William J. Hodge.

Manhattan—Albert Bates, George La Duke, J. S. Carroll, Edward Eagan, J. E. Connors, S. F. Gollish, J. W. Riggles.

Round Mountain—R. C. Reed, William Bryant, A. T. Cook, John Brown, James Donnelly.

Rhyolite—J. C. Wells, D. F. Lewis, Carl Johnson, E. P. Smith, S. R. Phall, Andrew Lyden.

Springdale—Jesse A. Kline.

Beatty—George E. Burner, Jesse Christenson.

Pioneer—W. L. Marks, R. G. Laws.

MACHINERY ARRIVES.

The first installment of the pumping machinery for the Mizpah mine, arrived yesterday in the shape of a carload of pipe of various dimensions. The pump is on the way and should arrive here any day. The cutting out of the station on the 1200-foot level has been completed, and when the pump arrives it will be immediately installed.

W. C. Humphreys came in from Manhattan Sunday to attend the county commissioners' meeting.

BUTLER THEATER OPENS WITH GOOD SIZED AUDIENCE

The Butler theater reopened last evening under the management of Terwilliger and Morris and good sized houses were present at both performances. The moving pictures displayed were the best that have been shown in this city and the management will make an effort to secure only the best and latest. Specialties will be introduced from time to time and there is no doubt as to the success of the venture. Both gentlemen have had considerable experience in the moving picture business and it is their intention to give a clean entertainment, where a couple of hours can be spent in a profitable way.
